Transportation Management for Shippers:
Ocean Module

Integrate ocean and dray moves into your transportation management process for enhanced execution and visibility

OVERVIEW

BluJay's Transportation Management for Shippers Ocean module is an ocean solution handling planning, execution, visibility, and settlement of ocean/dray moves supported by robust carrier and freight forwarder integrations. By supporting integrations with key parties, our Ocean module helps streamline the booking management process and settlement of freight costs, resulting in better visibility to freight costs, better service to your customers, and the ability to clearly differentiate your business in a competitive market.

SOLUTION AT A GLANCE

› Provides control over the order-to-cash process

› Collaborative partner integrations provide visibility to ocean carrier, freight forwarder, dray carrier, and partner data points

› Provides capabilities for enhanced visibility, with flexibility to respond to changing demands

› Provides capabilities for enhanced sailing schedule visibility

› Agile, scalable platform adapts and grows with your business

› Standardized shipper, carrier, and freight forwarder integrations enabling efficient data sharing

› Integration with ocean carrier trading partners to decrease complexity of implementations

› Integration with dangerous goods freight forwarders for robust product visibility

KEY FEATURES

› End-to-end ocean movement management enables milestone tracking of container throughout lifecycle

› Booking request, booking confirmation, shipping instructions, container status, and invoice workflow with standardized integrations

› Containerization capabilities via user interaction or shipper integrations core to the Ocean workflow

› Flexible document management options such as document attachments, document generation (HBOL, IMO form), and document as integration file (Shipping Instructions)

› Provides capabilities for customs filing visibility including US Export/US Import filing within the Ocean module via integrations across the BluJay Global Trade Network with Customs Management

› Shipper role to manage ocean leg direct with steamship lines and freight forwarder role to manage ocean leg with freight forwarders and rating/visibility to executing carriers

› Provides sailing schedule search capabilities embedded within the workflow

› Settlement of freight costs for ocean and dray legs

SOLUTION

BluJay's Transportation Management for Shippers Ocean module streamlines management of ocean and drayage transportation by unifying countless steps into a single workflow, which enables collaboration with key supply chain partners and sends data back to the shipper's ERP in a more efficient manner under one platform in the world's largest Global Trade Network.

The Ocean module brings control and transparency to a complex process that enables continuous improvement initiatives with key supply chain partners.

Your transportation team is able to request bookings, send shipping instructions, access key booking/sailing changes, and container status events increasing the overall efficiency of the ocean supply chain process.

The Ocean module can be deployed to suit your business. Our experts work with you to get you up and running quickly with an industry standard, best-practice configuration designed to support shipper managed ocean transportation and containerization.
